Adny May 14/50

Dear Sir John

Your Gnomonic projection shows the great circle course of a ship very beautifully in a straight line, and at once gives the latitude of the vertex; but it is a little troublesome to measure the angles of

Sir J Lubbock

of the courses, at each change,
and more so to get the
distance.

The difficulty you
mention, when the
two places are in dif=
ferent sheets, could be
overcome only by having
a double set of charts
— so as to lap over
by half quadrants

Very truly Yours

F. Beaufort

DSI

999 ~~BEAUFORT~~ A.L.S., Admty, May 14/50, to Sir John Lubbock, F.R.S., 2 pp. 8vo., £1. 10*s*

'Your Gnomonic Projection shows the great wide course of a ship very beautifully in a straight line, and at once gives the latitude of the vertex ; but it is a little troublesome to measure the angles of the courses, at each change, and more so to get the distance.'
